Art Unit: 2827

DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "Figure 2" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Figure 2 must show all of the limitations and structures of the claimed invention due to the present invention.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gurrie et al. (U. S. Patent 5,296,651) in view of Noda et al. (U. S. Patent 4,913,955).

As to claims 1-6, Gurrie discloses a flexible printed circuit board (10-figure 2, column 3, line 13) as shown in figures 1-4 comprising:

a base film (24, column 3, line 21);

a base film side adhesive layer (22-figure 4, column 3, line 20) provided on the base film (24);

Application/Control Number: 09/844,097

Art Unit: 2827

a metal coil layer (12, column 3, line 11) on which a pattern circuit is formed, provided on the base film side adhesive layer (22-figure 4); and

a cover layer side adhesive layer (20-figure 4, column 3, line 20) provided on the metal foil layer (12).

Gurrie does not teach a material made by an epoxy resin adhesive that being form said base film side adhesive layer and cover layer side adhesive layer having a high glass transition temperature (greater 60 or 80 degrees Celsius) than an operating temperature of the flexible circuit board.

Noda teaches a flexible circuit board (1-figures 1-3) comprising a center adhesive layer (5-figure 1, column 3, line 17) made by an epoxy resin adhesive that provide a high glass transition temperature (about 130 degrees Celsius) than an operation temperature (column 3, lines 1-2).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use an epoxy resin adhesive that provide a high glass transition temperature than an operation temperature as taught by Noda to employ the flexible circuit board of Gurrie in order to prevent a flexion of laminate of the flexible circuit board at high temperature, and also provide a flex life of the flexible circuit board being the number of times the circuit can be flex before failing.

As to claims 5-6, Gurrie discloses the claimed invention, except for the specific bending life of the flexible circuit board being a one million to ten million times or greater at 80 degrees Celsius

Application/Control Number: 09/844,097

Art Unit: 2827

Gurrie and Noda disclose the bending life of the flexible circuit board which in a range to provide a long life for the flexible circuit board at 130 degrees Celsius.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have a bending life of one million to ten million times to provide the expected longevity of the flexible circuit board.

Response to Arguments

4. Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Uedo et al., and Miyaake et al. disclose related art.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T Dinh whose telephone number is 703-306-5856. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David L. Talbott can be reached on 703-305-9883. The fax phone numbers for the organization where this application or proceeding is assigned are 703-305-1341 for regular communications and 703-305-1341 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
